

Overview

Roundhill believes AI compute demand is outpacing supply, positioning neocloud companies to potentially capture the shortfall. The Roundhill Neocloud ETF (NCLD) seeks to offer exposure to a targeted basket of neocloud companies. NCLD is an actively managed ETF.

Why NCLD?

 **Toll Roads of AI** - Neocloud providers typically lock in multi-year compute contracts, generating potentially steadier, more predictable revenue than the on-demand model of traditional cloud.

 **Accelerating Compute Demand** - Morgan Stanley estimates roughly \$2.9 trillion in global data center construction through 2028, driven by compute demand that vastly exceeds supply.¹

 **Pure Play** - NCLD seeks to offer precise exposure to the leading neoclouds.

Fund Performance

	1 Year	3 Year	5 Year	Since Inception
NAV	N/A	N/A	N/A	N/A
Market	N/A	N/A	N/A	N/A

The performance data quoted represents past performance. Past performance does not guarantee future results. Current performance may be lower or higher than the performance data quoted. The investment return and principal value of an investment will fluctuate so that an investor's shares, when sold or redeemed, may be worth more or less than their original cost. Returns less than one year are not annualized. For the most recent month-end performance, please call (855) 561-5728. You cannot invest directly in an index. Shares are bought and sold at market price (closing price), not net asset value (NAV), and are individually redeemed from the Fund. Market performance is determined using the Primary Exchange official closing price. Brokerage commissions will reduce returns.

Investors should consider the investment objectives, risks, charges, and expenses carefully before investing. For a prospectus or summary prospectus, if available, with this and other information about the Fund, please call 1-855-561-5728 or visit our website at www.roundhillinvestments.com/etf/ncl/. Read the prospectus or summary prospectus carefully before investing.

Neocloud Companies Risk. Neocloud Companies may be subject to rapid changes in technology, intense competition, government regulation, and obsolescence risk. Securities of such companies may be subject to greater price volatility than securities of companies in other sectors, particularly over the short term. The prices of securities of companies in these industries may fluctuate widely due to competitive pressures, rapid product cycles, changes in the regulatory environment, and shifts in supply and demand dynamics. Many Neocloud Companies are relatively small and may have limited product lines, markets, financial resources, or personnel, making them more susceptible to business risks and adverse developments. Neocloud Companies may also be dependent upon government contracts or subsidies, which may be subject to cancellation, renegotiation, or delay in payment. Additionally, the success of Neocloud Companies may be contingent upon the broader adoption of related technologies, including artificial intelligence, cloud computing, data center infrastructure, and high-performance computing. A slowdown or disruption in the growth of these related sectors could materially and adversely affect the revenues and profitability of Neocloud Companies in which the Fund invests.

Line of Business Risk. Certain companies included in the Fund's portfolio will be engaged in other lines of business unrelated to the development of Neocloud Companies products, and these lines of business could adversely affect their operating results. The operating results of these companies may fluctuate as a result of these additional risks and events in the other lines of business. Despite a company's possible success in activities linked to its development of Neocloud Companies products, there can be no assurance that the other lines of business in which these companies are engaged will not have an adverse effect on a company's business or financial condition. **Active Management Risk.** The Fund is actively-managed and its performance reflects investment decisions that the Adviser and/or Sub-Adviser makes for the Fund. Such judgments about the Fund's investments may prove to be incorrect. If the investments selected and the strategies employed by the Fund fail to produce the intended results, the Fund could underperform as compared to other funds with similar investment objectives and/or strategies, or could have negative returns.

Asia Risk. The Fund invests significantly in the securities of Asian issuers. As such, the Fund is subject to certain risks specifically associated with investments in the securities of Asian issuers. Many Asian economies have experienced rapid growth and industrialization, and there is no assurance that this growth rate will be maintained. Some Asian economies are highly dependent on trade, and economic conditions in other countries within and outside Asia can impact these economies. Certain of these economies may be adversely affected by trade or policy disputes with its major trade partners. There is also a high concentration of market capitalization and trading volume in a small number of issuers representing a limited number of industries, as well as a high concentration of investors and financial intermediaries. Certain Asian countries have experienced and may in the future experience expropriation and nationalization of assets, confiscatory taxation, currency manipulation, political instability, armed conflict and social instability as a result of religious, ethnic, socio-economic and/or political unrest. In particular, escalated tensions involving North Korea and any outbreak of hostilities involving North Korea could have a severe adverse effect on Asian economies. Governments of certain Asian countries have exercised, and continue to exercise, substantial influence over many aspects of the private sector. In certain cases, the government owns or controls many companies, including the largest in the country. Accordingly, government actions could have a significant effect on the issuers of the Fund's securities or on economic conditions generally. Recent developments in relations between the U.S. and China have heightened concerns of increased tariffs and restrictions on trade between the two countries. An increase in tariffs or trade restrictions, or even the threat of such developments, could lead to a significant reduction in international trade, which could have a negative impact on the economy of Asian countries and a commensurately negative impact on the Fund.

Depository Receipts Risk. Depository receipts may be less liquid than the underlying shares in their primary trading market. Any distributions paid to the holders of depository receipts are usually subject to a fee charged by the depository. Holders of depository receipts may have limited voting rights, and investment restrictions in certain countries may adversely impact the value of depository receipts because such restrictions may limit the ability to convert the equity shares into depository receipts and vice versa. Such restrictions may cause the equity shares of the underlying issuer to trade at a discount or premium to the market price of the depository receipts.

Concentration Risk. The Fund is concentrated in the industry or group of industries comprising the industrials sector and the information technology sector. The Fund may be susceptible to an increased risk of loss, including losses due to adverse events that affect the Fund's investments more than the market as a whole, to the extent that the Fund's investments are concentrated in the securities and/or other assets of a particular issuer or issuers, country, group of countries, region, market, industry, group of industries, sector, market segment or asset class.

Information Technology Companies Risk. Information technology companies face intense competition, both domestically and internationally, which may have an adverse effect on profit margins. Like other technology companies, information technology companies may have limited product lines, markets, financial resources or personnel. The products of information technology companies may face obsolescence due to rapid technological developments, frequent new product introduction, unpredictable changes in growth rates and competition for the services of qualified personnel. Companies in the information technology sector are heavily dependent on patent and intellectual property rights. The loss or impairment of these rights may adversely affect the profitability of these companies. Information technology companies are facing increased government and regulatory scrutiny and may be subject to adverse government or regulatory action.

New Fund Risk. The Fund is a recently organized investment company with a limited operating history. As a result, prospective investors have a limited track record or history on which to base their investment decision.

Non-Diversification Risk. As a "non-diversified" fund, the Fund may hold a smaller number of portfolio securities than many other funds. To the extent the Fund invests in a relatively small number of issuers, a decline in the market value of a particular security held by the Fund may affect its value more than if it invested in a larger number of issuers. The value of the Fund Shares may be more volatile than the values of shares of more diversified funds.

Swap Agreements Risk. The Fund may utilize swap agreements to derive its exposure to Neocloud Companies. Swap agreements may involve greater risks than direct investment in securities as they may be leveraged and are subject to credit risk, counterparty risk and valuation risk. A swap agreement could result in losses if the underlying reference or asset does not perform as anticipated. In addition, many swaps trade over-the-counter and may be considered illiquid. It may not be possible for the Fund to liquidate a swap position at an advantageous time or price, which may result in significant losses.
